

Biliv-Augmenta Employee-Attrition Analysis Project

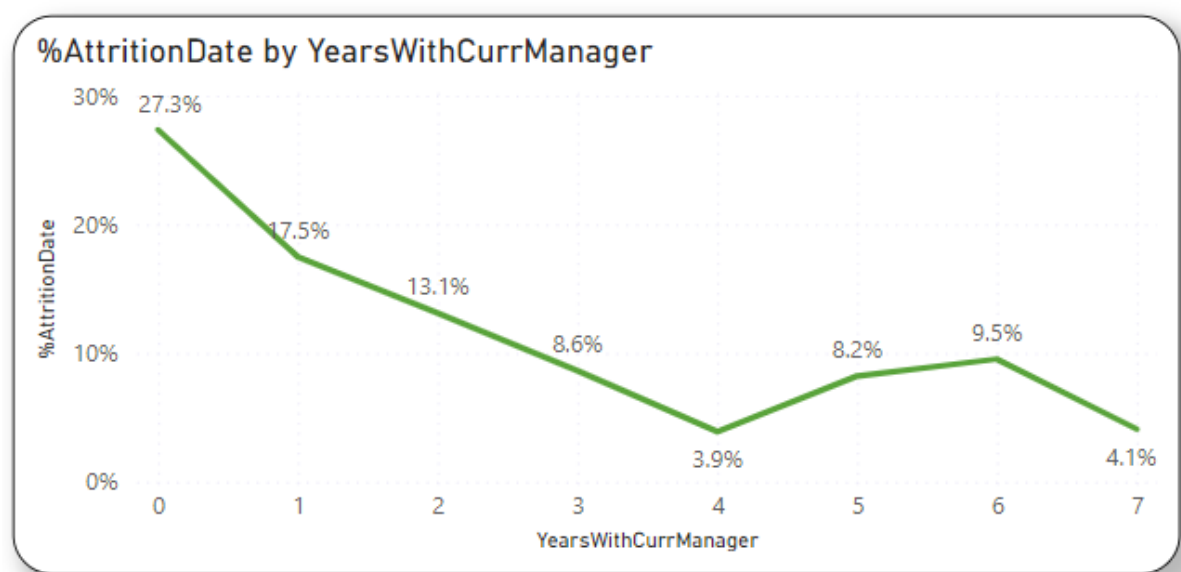

Prepared By: Wiredu Felix

12th November, 2024

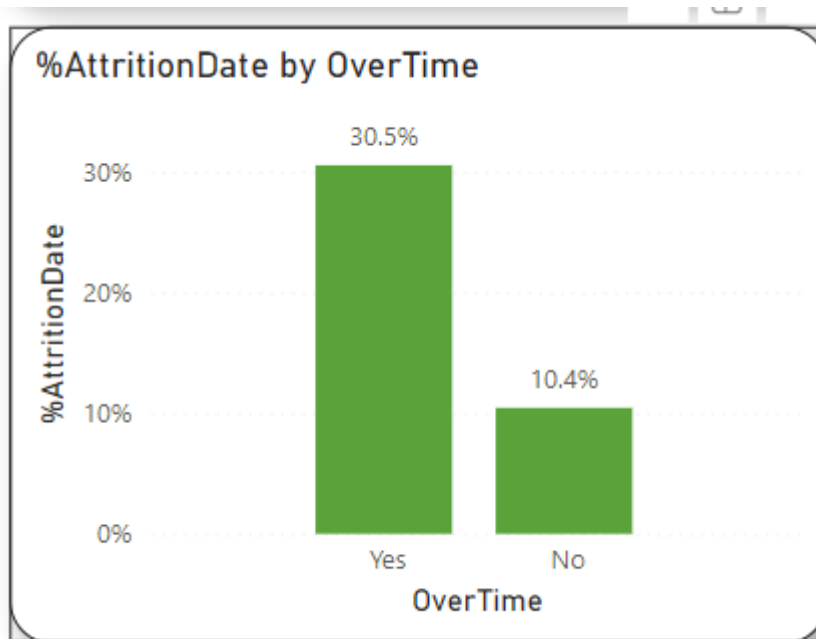

Key Insights:

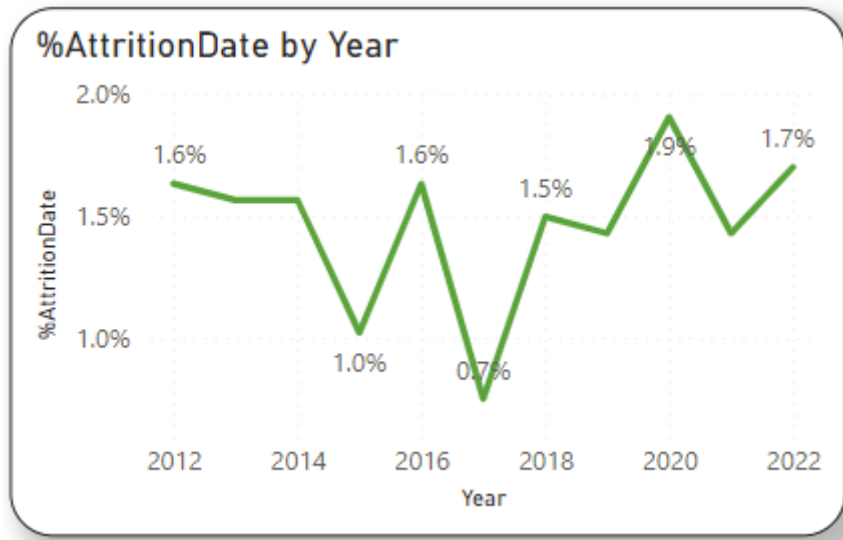

1. Employees recently promoted have higher attrition rates than those who haven't been promoted in a while.

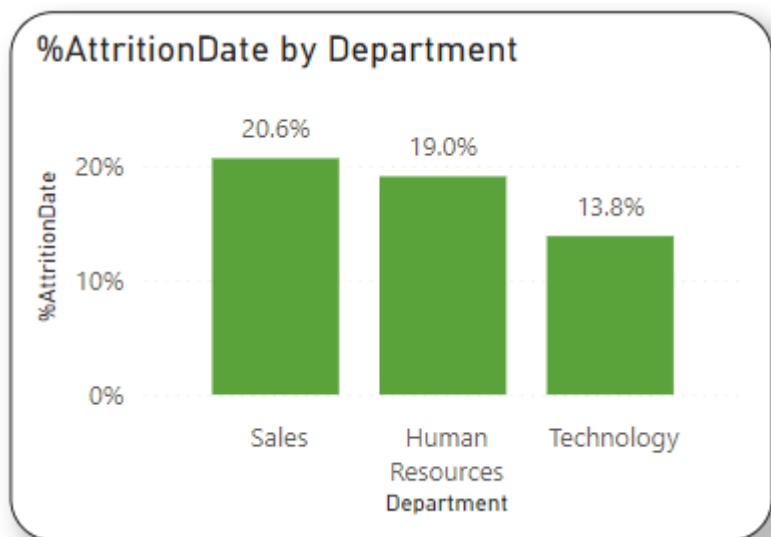

2. The more years employees spend with a particular manager, the lesser the attrition rate. This may be because, over time, the employees and the manager build a bond in the workplace which, working easier and enjoyable for both parties.

3. A higher attrition rate is associated with employees who work overtime. Overtime-working employees have an attrition rate almost triple that of those who do not work overtime.

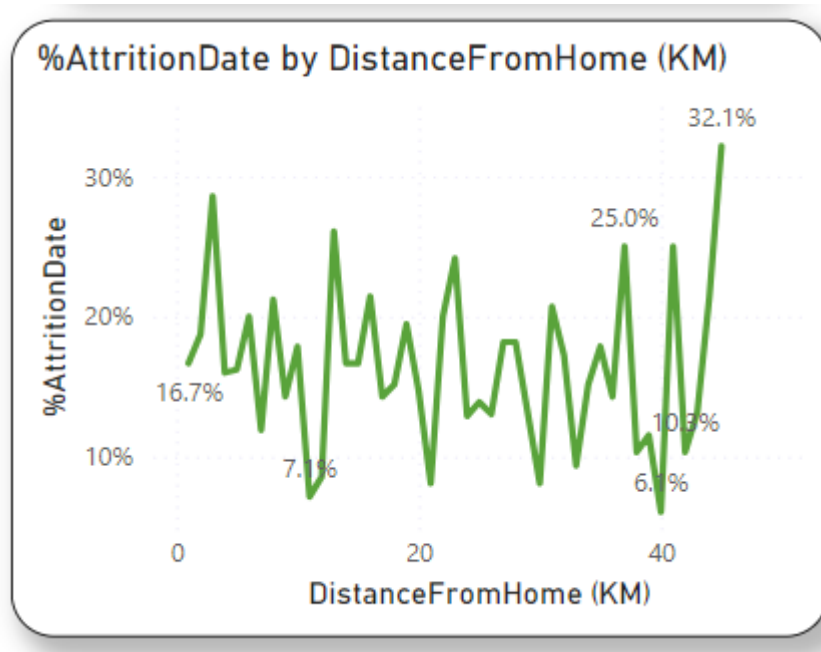

4. The attrition rate was high in 2012 when the company first started. Over the years it has peaked in 2016, 2018, 2020 and 2022. It peaked highest in 2020 and this is probably because of the COVID-19 pandemic which saw a high employee layoff rate that year.

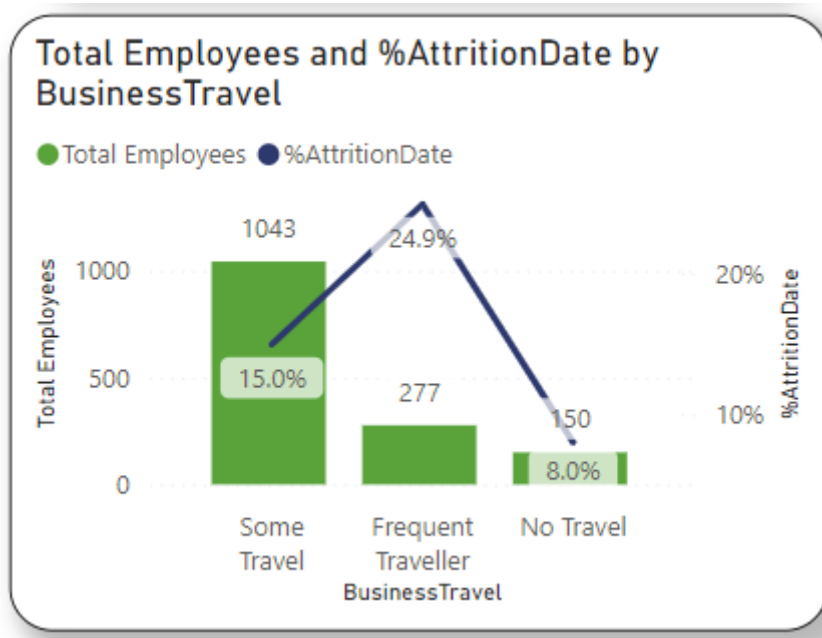

5. The attrition rate in the Sales department is highest, followed by Human Resources and Technology respectively. The high attrition rate in the sales

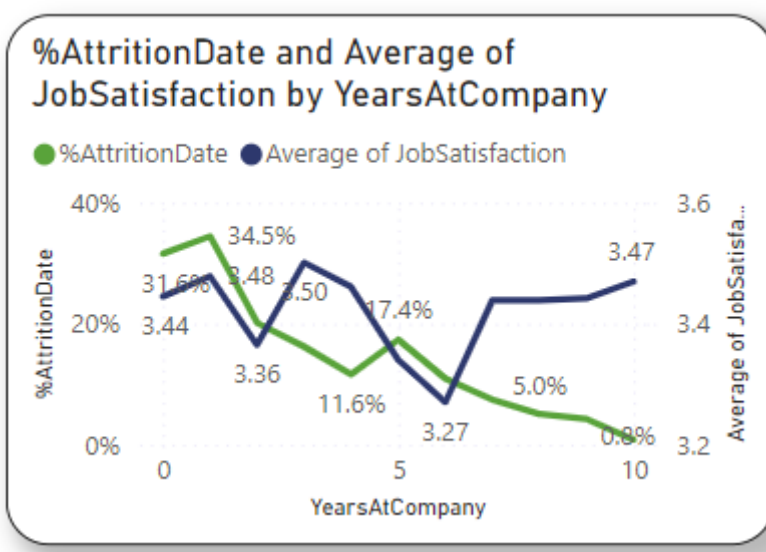

department can be attributed to burnout from working with exasperating customers who drain them both physically and emotionally.

6. There is no clear distinction as to whether an employee's distance to commute from home to work affects their attrition rate. However, it is fair to note that employees who live the farthest from the workplace have the highest attrition rate with those living closest coming in second place.

7. Employees who tend to embark on business travels have a higher attrition rate than those who do not. This might be because the employee gets tired of being away from home and family for extended periods. This creates environmental and relationship instability for the employee.

8. The longer employees work in the company, the lower their attrition rate and the higher their job satisfaction.

Recommendations:

1. Managers assigned to employees shouldn't be changed too frequently as this reduces stability in the workplace and leads to high employee turnover.
2. The high attrition rate in the Sales department can be reduced significantly by implementing workplace policies that protect such employees from abuse by certain customers. In-house counsellors should also be assigned to frequently assess employees in the Sales and Human Resources departments.
3. Employees who work overtime must be adequately compensated and their hours must be carefully regulated to keep them incentivized to stay.
4. The number of business trips an employee embarks on must be carefully regulated and distributed appropriately enough for the employee to be able to cope with it.

5. Company policies such as training and retraining activities, salary bonuses and employee awards must be implemented to make employees more productive and motivated to stay.

CONCLUSION

Key Insights:

1. **Recent Promotions:** Higher attrition rates among recently promoted employees.
2. **Manager Tenure:** Longer time with the same manager results in lower attrition.
3. **Overtime:** High attrition for employees working overtime.
4. **Historical Peaks:** Attrition peaked in 2012, 2016, 2018, 2020 (highest due to COVID-19), and 2022.
5. **Departmental Attrition:** Highest in Sales, followed by HR and Technology.
6. **Commute Distance:** No clear pattern, but highest attrition for those living farthest.
7. **Business Travel:** Higher attrition among employees who frequently travel.

-
8. **Tenure:** Longer tenure correlates with lower attrition and higher job satisfaction.

Recommendations:

1. **Stable Manager Assignments:** Maintain consistency in manager assignments.
2. **Support for Sales:** Protect Sales staff from customer abuse and provide counseling.
3. **Overtime Compensation:** Regulate and compensate overtime work.
4. **Regulate Business Trips:** Balance the number of business trips.
5. **Employee Incentives:** Implement training, bonuses, and awards.

Further Analysis Suggestions:

1. **Employee Engagement:** Study engagement levels.
2. **Work-life Balance:** Assess initiatives' impact on attrition.
3. **Career Development:** Explore career development's role in retention.
4. **Exit Interviews:** Analyze common reasons for leaving.
5. **Compensation Analysis:** Evaluate the impact on retention.
